This is the home screen of the Data Accessioner Metadata Transformer tool. You can use this tool to create a report from the XML. The tool will generate a .CSV and HTML file that is easier to read than the raw XML.

To get started, click on the "Add DA Metadata" button.

00	DataAccessioner Metadata Transformer

You can also view the report in an HTML file. The HTML version has drop-down arrows so you can view more or less. It follows the hierarchical structure of the original folders and files chosen to accession in Data Accessioner.

NOTE: expand/collapse arrows currently only work in Chrome.
